Metodología Aplicada

La metodología de trabajo consistió en estratificar cada Medicamento Genérico que ha presentado consumo según Forma Farmacéutica, Dosis/Unidad y Presentación. Cada Grupo/Segmento está compuesto por distintas Marcas Comerciales que tengan homogeneidad en las características mencionadas.

Para la definición del nuevo Monto Fijo, enunciado como “Monto Fijo Propuesto” se utilizaron los PVP al 31 de Julio del 2019 y una formula estadística para definir la media ponderada del PVP por Grupo/Segmento, detallada a continuación:

$$\bar{x} = \frac{\sum_{i=1}^n x_i w_i}{\sum_{i=1}^n w_i} = \frac{x_1 w_1 + x_2 w_2 + x_3 w_3 + \dots + x_n w_n}{w_1 + w_2 + w_3 + \dots + w_n}$$

Siendo “Xi” el precio de cada una de las Marcas Comerciales del segmento.

Y “Wi” la cantidad consumida de dicho producto.

Por último, “ \bar{x} ” representará la media ponderada del PVP por Grupo/Segmento.

Dicha media se multiplicará por 0,7 (correspondiente al 70% que se pretende cubrir con la nueva propuesta). El resultado nos brinda un “Monto Fijo al 70% Ponderado” para su respectivo Grupo/Segmento.

Una vez determinado el “Monto Fijo al 70% Ponderado”, prevalecerá el mismo, siempre y cuando sea igual o mayor al Monto Fijo de la RESOL-1389-GDEBA-IOMA. En caso contrario, se mantendrá este último.

También mantendrán el Monto Fijo de dicha resolución, aquellos que no hayan presentado consumo.

Obteniendo así, el **“Monto Fijo Propuesto”** para la totalidad de Grupos/Segmentos incluidos en la presente.
